

Brainstorming & Idea Prioritization

Date	28 june 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

S.no	Team Member	Idea / Suggestion	Category	Group No.
1	B.Supraja chowdary	Use Logistic Regression as a baseline ML model to predict credit card approval based on applicant financial data	ML Modelling	1
2	k.Akhil kumar	Apply Random Forest classifier to handle non-linear relationships between income, credit history, and loan balances	ML Modelling	1
3	M. thanoj	Integrate XGBoost (Gradient Boosting) for higher accuracy and robustness on imbalanced credit datasets	ML Modelling	1
4	Team Discussion	Build a Flask web application as the front-end interface for credit analysts and customers to enter applicant data	Web Application	—
5	Team Discussion	Deploy the best-performing model on IBM Watson Machine Learning for scalable cloud-based real-time predictions	Cloud Deployment	—
6	Team Discussion	Engineer features from multi-class payment status codes into binary risk labels to improve model classification	Feature Engineering	—

Step 2: Idea Prioritization

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
1	Build and compare ML models (Logistic Regression, Random Forest, XGBoost, Decision Tree) for credit card approval prediction; select the best-performing model based on accuracy and F1-score	High	High	1st	Yes
2	Develop a Flask web application with an intuitive UI for credit analysts and customers to input applicant data and receive instant approval/rejection predictions	High	High	2nd	Yes
3	Deploy the optimised model on IBM Watson Machine Learning to enable cloud-hosted, scalable, real-time predictions via API	Medium	High	3rd	Yes
