

Communication

Date	04 june 2026
Team ID	
Project Name	Credit Card Approval Prediction
Maximum Marks	1 Mark

Communication Plan

Effective communication is essential for a successful project demonstration. This document outlines the communication strategy used within the team and with stakeholders throughout the project lifecycle, including how updates, issues, and feedback were managed for the Credit Card Approval Prediction System project.

S.No	Communication Type	Frequency	Channel / Tool	Participants	Purpose
1	Team Standup	Daily	Google Meet / WhatsApp Group	B.Supraja chowdary K. Akhil kumar reddy M..Thanoj	Share daily progress on data preprocessing, model training, and Flask app development; flag blockers early.
2	Progress Update	Weekly	MS teams\ Email	M..Thanoj K. Akhil kumar reddy B.Supraja chowdary	Report weekly milestones (EDA, feature engineering, model building, deployment) and align on next steps.
3	Issue / Bug Discussion	As Needed	WhatsApp Group / GitHub Issues	Team members facing the issue and relevant contributors	Discuss and resolve technical issues such as model accuracy problems, Flask errors, or IBM Watson deployment failures.
4	Stakeholder Review	Bi-Weekly	Zoom / MS Teams	Team members, project mentor, and evaluators	Present project progress, demo the web application, and gather feedback on the credit card approval model.
5	Final Demo Rehearsal	Once	Zoom / In-person	K. Akhil kumar redd M..Thanoj B.Supraja chowdary	Rehearse the final project demonstration, including live prediction demo and Q&A preparation.
6	Code Review	Weekly	GitHub Pull Requests	Developers and reviewer	Review code quality, model evaluation scripts, and Flask application code before merging.

Communication Challenges & Resolutions:

S. N o	Challenge Faced	Resolution / Action Taken
1	Team members were in different time zones, making daily standups hard to schedule.	Fixed a common standup slot in the evening and shared a recorded summary for absentees.
2	Miscommunication on the target label encoding (binary vs multi-class payment status) caused inconsistent model results.	Held a dedicated technical discussion to standardize feature engineering rules and documented them in a shared doc.
3	Delay in IBM Watson Machine Learning deployment credentials caused a bottleneck for the deployment task.	Escalated the issue to the mentor during the stakeholder review and reassigned tasks so other modules could progress in parallel.
